

ABSTRACT

The research is to find out the differences motivation from two groups of students, which are the students who take English course (group A) and who do not (group B), and also the correlation of students' motivation with their English score at school. The object of the research is the 8th grade of junior high school students at Kristoforus. The research used questionnaire to get the motivation of the students and also get the English score data from their school. The questionnaire included 30 questions to get the motivations of the students. The results of the study are, first that there is not difference of motivation between the two groups of the student, they have both type of motivation intrinsic motivation (IM) and extrinsic motivation (EM). Second result, that there is no correlation of IM or EM with the English score, but there is correlation of EM with their English score at group B.

Keywords : *Motivation, Intrinsic Motivation, Extrinsic Motivation*
